Student Number: 23072149

User attitudes summary

Positive Body Movement and Mental Health in Students

User attitudes summary

The user attitudes obtained from both interviews and observations highlighted the significance of positive body movement in supporting the mental health and well-being of university students. I did interviews with 6 participants and observed 2 participants from them, revealing a broad spectrum of perspectives and behaviors related to physical activity.

My interviews showed a shared understanding of positive body movement as engaging in simple, enjoyable activities such as walking, stretching, or light exercises. Participants emphasized that movement does not require rigorous workouts but can be integrated into daily routines, such as commuting or study breaks. Most viewed movement as essential to mental health, citing benefits such as reducing stress, sharpening focus, and boosting mood. Specific activities mentioned included walking, stretching, playing sports, and even mindful exercises like gaming with finger movement.

Observation data showed varying levels of activity between participants. One participant displayed minimal movement, with step counts as low as 12 on one day, while another participant engaged in more consistent walking and logged significantly higher step counts. Both participants described their weekends as enjoyable and typical, indicating contentment with their routines despite differing activity levels.

While observations suggested a wide disparity in activity levels, interviews revealed a unanimous acknowledgment of the movement's importance. Participants who appeared less active during observations still expressed an understanding of the movement's benefits and described attempts to incorporate it into their routines. This indicates that external factors, such as time constraints or weather, may impact observed behavior but do not necessarily reflect attitudes.

These findings suggest that a typical student values positive body movement for its mental health benefits but may face barriers such as lack of time, proximity to green spaces, or bad weather conditions such as raining. Students desire accessible, low-effort ways to incorporate movement into their busy schedules. Technological tools, such as fitness apps, were also identified as motivators, offering tangible goals and feedback.

In conclusion, students know the mental health advantages of movement and seek practical ways to stay active. Promoting small, flexible opportunities for movement, such as campus walking paths or stretch-friendly spaces, could align with students' needs and preferences.

Design Recommendations

Recommendation	Evidence for this from interviews / observation	Priority
Emphasize quick and manageable activities that can fit into a busy student schedule.	"Time is a big barrier, especially near exams." "I integrate small movements, like stretching during study breaks or taking a walk during break time in lecture."	high
Provide options for indoor movement or adaptable solutions that work in various weather conditions.	"If it's raining, I need to take the bus instead of walking back home." "Having green spaces nearby increases my ability to engage in walking."	high
Integrate simple, gamified tracking systems to reward progress and maintain engagement.	"Fitness apps and smartwatches motivate me. Seeing steps or goals achieved is satisfying." "Looking at how many steps I walked could stay motivated to keep moving."	Medium
Allow for customizable movement routines or incorporate engaging activities that align with individual interests.	"I like following my favorite game 3DMV dance. Doing something I like reduces my stress." "Stretching really helps me slow down and focus on my breathing, which clears my mind."	Medium
Educate users on the mental health benefits of positive body movement, emphasizing its role in stress management and focus improvement.	"Walking outside helps me feel less stressed and more energetic, especially during exam weeks." "Engaging in physical activity allows me to escape from stress and focus better."	High

Updated User needs

User Need	Solutions / Rewards
Flexible, accessible ways to stay active	•Show examples of short, easy activities that fit into busy schedules. •Use engaging visuals or animations to illustrate movement in different settings
Social support and motivation	•Feature user stories about people finding motivation through social connections.
Guidance on overcoming academic stress	•Suggest quick, structured breaks to reduce stress without disrupting productivity.
A sense of progress and achievement	•Show real-time progress tracking or reflection prompts. •Use social media-style updates where users can share small wins.
Opportunities to explore and connect with new experiences	•Provide a resource hub listing free/affordable movement opportunities. •Use notifications to suggest relevant local events or online challenges.

Personas x 3

Persona 1

Age: 20~21
Role: University student
Location: UK
From: Hong Kong

Goals:
1. Maintain physical activity despite a busy academic schedule.
2. Use movement to manage stress and improve concentration.
3. Find enjoyable, non-traditional ways to stay active
4. Balance studies and well-being effectively

Challenges:
1. Balance studies and well-being effectively
2. Tendency to deprioritize movement when overwhelmed
3. Weather constraints affecting outdoor activities
4. Lack of accessible, dedicated spaces for movement on campus

Motivators:
1. Feeling mentally refreshed after movement.
2. Seeing progress through fitness apps or self-tracking.
3. Enjoying social aspects of casual movement.
4, Using movement as a way to reset and refocus.

Routine:
Weekdays: Walks to campus, takes study breaks with stretching, occasional biking.

Weekends: Tries to do longer walks, casual sports, or light workouts at home.

Needs:
1. Structured, short activity breaks.
2. Indoor spaces.
3. Reminders to stay active.

Behaviour & Mindset:
1. Understands the importance of movement but sometimes feels guilty prioritizing it over studies.

2. Feels more productive and mentally clear after physical activity.

3. Seeks enjoyable, stress-free ways to integrate movement rather than formal workouts

4. Uses small movement habits but wishes for more consistency.

Persona 2

Age: 21~22
Role: University student
Location: UK
From: UK

Goals:
1. Push to have new experience's/opportunities

2. Find ways to gain motivation to keep active

3. Try balance finance in better ways

4. Start reaching out for help when in times of need, and finding who to feel comfortable talking to

Challenges:
1. Feels like they are struggling with knowing how to save money
2. Anxious about starting a new activity on their own
3. Feels isolated in a new city with no knowledge on the area/people
4. Worried about reaching out to piers for help and advice

Motivators:
1. Pleasure of feeling included in group settings
2. Feeling more confident after keeping body active
3. Experiencing the benefits for mental health after taking active routines
4, Getting help and guided through hurdles

Routine:
Weekdays: Longer walk to bus stop, Go to uni, sometimes will drop into the gym on the way back home

Weekends: Goes on a light walk to near view point, and will go out in the evening

Needs:
1. Guidance on where to find new opportunities

2. Access to meet new people

3. Places to reach out for help

Behaviour & Mindset:
1. Wants to start engaging into the fitness world more but is anxious about starting

2. Knows the benefits of keeping healthy and strives to live that lifestyle

3. Needs help and guidance on new responsibilities but is worried about asking

4. Feels isolated when life gets stressful

Persona 3

Age: 20~21
Role: University student
Location: Bristol

Goals:
1. Integrate positive movement into their daily routine.
2. Stay motivated and make movement enjoyable rather than a chore.
3. Balance academic responsibilities with staying active.
4. Use movement as a way to boost mental well-being.

Challenges:
1. Struggles to stay active during bad weather.
2. Feels unmotivated when lacking a workout buddy or social support.
3. Balancing academic workload and positive body movement.
4. Expensive indoor space booking fees limit access to structured activities or fitness facilities.

Motivators:
1. Feeling refreshed and energized after movement.
2. Enjoying movement when it's social or fun.
3. Small incentives, such as rewards for step goals.
4. Seeing fitness content on social media for inspiration.

Routine:
Weekdays: Walks or bikes to university and back, depending on weather; occasionally visits the gym with a housemate.
Weekends: Spends more time indoors but may go out with friends in the evenings.

Needs:
1. Free environment for both outdoor and indoor activity.
2. Support of meeting new friends.
3. Flexibility in integrating movement with their academic schedule.

Behaviour & Mindset:
1. Prefers casual and enjoyable movement over structured workouts.

2. Understands the mental and physical benefits of staying active but struggles with consistency.

3. Depends on social connections to make physical activity more enjoyable and sustainable.

4. Believes that small changes in daily habits can significantly impact their well-being.

User Journey x 3

User Journey 1

User Journey: Incorporating Positive Body Movement into Daily Life

Scenario: A university student who wants to incorporate physical activity into their routine, primarily by walking, while balancing academic responsibilities.

EXPECTATIONS:

- Activities should be simple and seamlessly fit into their daily routine.
- Should help manage academic stress.
- Should integrate motivation techniques to prevent distractions.

Awareness

Realizes she feel stressed and unfocused during the day, particularly after long study sessions.

(つд⊂)
Frustrated, overwhelmed.

Goals:
1. Find small, manageable ways to incorporate movement into daily life.
2. Relieve stress without needing extensive time or effort.

Pain Points:
1. Feels guilty about not having time for workouts.
2. Doesn't know how to make small, positive changes.
3. Weather and academic pressure limit opportunities for movement.

Research

She considers ways to include more movement, such as walking home from university or trying light activities she enjoy.

(。•́ ︿ •̀。)
Curious but discouraged.

Goals:
1. Incorporate stress-relieving movement that fits into her busy schedule.
2. Find something enjoyable rather than feeling like a chore.

Pain Points:
1. Bad weather conditions disrupt walking routines.
2. Proximity issues: Campus location requires long commutes, leaving little time for other activities.
3. Feels unmotivated to try when under academic stress.

Attempt

She begins walking home from university when the weather is good and tries dancing at home by following her favourite game's dance video.

(≧▽≦)
Energized when moving

(╥﹏╥)
discouraged when plans fail.

Goals:
1. Use walking as a way to get fresh air and clear her mind.
2. Use dancing as a stress-relieving activity she genuinely enjoy.

Pain Points:
1. Struggles to make these habits consistent—rain and academic deadlines often interfere.
2. Gets distracted by games or YouTube when trying to relax.
3. Feels sleepy or unmotivated when they don't move enough, creating a cycle of inactivity.

Reflection

She reflects on her efforts and notices some benefits but feels inconsistent progress.

(*｀ω´*)✧
Proud of small successes

(´•_•`)
disappointed by setbacks

Goals:
1. Sustain a daily routine that includes positive movement, even on busy or rainy days.
2. Improve focus and mental health by staying active.

Pain Points:
1. Feels frustrated when movement isn't possible due to external factors.
2. Struggles to track whether small movements are improving her mental health.
3. Feels she need more motivation or tools to make movement a consistent habit.

User Journey 2

User Journey: Incorporating Positive Body Movement into Daily Life

Scenario: A university student who wants to start getting active in the gym but is feeling anxious about starting a new activity on their own.

EXPECTATIONS:
- To get the right guidance on where to find new opportunities.
- Find people with similar interests and goals to help boost motivation.
- Safe spaces to ask for help without fear of judgment.

Awareness

Realizes that he is feeling lazy and in-active when coming back from university

Unmotivated, Lost.

Goals:
1. Start pushing to get over the initial fear of going to fitness activities
2. To gain a more health beneficial routine

Pain Points:
1. Feels guilty for not going to the gym
2. Feels anxious about starting a new activity on their own
3. Doesn't know anyone to start this new activity with

Research

He looks into when their are drop on sessions to help start learning the gym equipment

Curious but Anxious.

Goals:
1. Start attending group sessions in the gym in hopes to find a buddy to keep fit with
2. Find the motivation and time to start the new routine.

Pain Points:
1. Booking time slots to work around university schedule
2. Buying a gym membership which is another thing to think about when tackling finance
3. Feels anxious about meeting new people in a unfarmilia enviroment.

Attempt

He books a session in at the university gym in which he has met a couple of new people to help kick start his new fitness journey

Proud of pushing themself for new experience.

Anxious for any changes in future.

Goals:
1. Uses gym to help meet new people with similar interests
2. Uses fitness to keep a active and healthy routine

Pain Points:
1. Struggles to book appointments regularly due to university timetable and gym closing times
2. Feels fatigued from being at uni all day which results in relaxing when home
3. Starts feeling shame when he doesn't go the gym multiple times a week.

Reflection

He is proud of himself for pushing himself to this new opportunity but now needs to stick to a routine revolving it

Proud of small successes

needs to stay disciplined

Goals:
1. Keep attending the gym sessions, even if not sure who's going
2. Start making a written down routine to stick to revolving the gym.

Pain Points:
1. Feels unmotivated when missing multiple sessions a week.
2. Struggling to stick to the routine whilst keeping on top of uni work.
3. Feels he needs to make a reliable friend to go with to the new activity.

User Journey 3

User Journey: Incorporating Positive Body Movement into Daily Life

Scenario: A university student who wants to incorporate physical activity into their routine, by trying out new casual exercises and to get back into a new and fun gym routine.

EXPECTATIONS:

- Should have a well planned out daily routine thats easy to stick to.
- Should help improve overall mental health and wellbeing.
- Should help improve overall motivation to daily tasks.

Awareness

Realises he needs to find the motivation if he wants to start bettering his mental health through physical exercise

😕 demotivated, overwhelmed.

Goals:
1. Find ways to make workouts enjoyable when alone.
2. To find the benefits of having a active routine.

Pain Points:
1. Finding it hard to gain that initial motivation.
2. Only has his housemate as a active buddy.
3. University timetable isn't as flexible as he needs it to be

Research

He starts looking into new ways of adapting his daily routine online and is also using tiktok to find different workout routines to help make working out new and exciting.

😐 Curious but discouraged.

Goals:
1. Find 2 casual forms of exercise which he can fit into his daily routine.
2. To try out a new form of exercise that he has found online.

Pain Points:
1. Some of the workouts he wants to do can't be performed due to the uni facilities.
2. Has no one pushing him to really kick start his new journey.
3. Feels unmotivated to try when under academic stress.

Attempt

He starts bringing running gear to university in which he starts doing 40 minute runs back home each day, and has also tried out a new workout routine which is working well for him

🤩 Energized when moving

😟 discouraged when plans fail.

Goals:
1. Use running as a way to get fresh air and clear his mind.
2. Use solo gym sessions as a time to start trying out new muscle groups.

Pain Points:
1. Struggles to run when weather conditions are extreme.
2. Is still trying to find the motivation to stick to his new routine by himself.
3. Finds that having both of these new changes is resulting in less time to relax when uni work gets intense.

Reflection

He reflects on his new changes to his daily routine and hopes to continue as much as possible.

👍 Proud of small successes

😞 disappointed by setbacks

Goals:
1. Sustain a daily routine that includes positive movement, even on busy or rainy days.
2. Help improve his overall motivation through keeping a balanced physical routine.

Pain Points:
1. Feels dis-accomplished when he isn't able to stick to his new routine.
2. Struggles to get back on track when a day or two is missed.
3. Feels he needs more motivation maybe through having a dedicated workout buddy.

Updated user journey

Updated User Journey

Bosco Choi

Scenario

It is a weekend morning, and Bosco wants to follow his plan to work on an assessment, but he struggles to focus. To clear his mind, he decides to take a walk outside. After returning home, he realizes that his mind feels clearer, and he is able to concentrate better on his work. Inspired, he starts integrating physical activity into his daily routine. However, after two weeks, he loses motivation as he finds exercising alone boring. Upon discovering the 'Move Motivator' app, Bosco finds that physical activity can be fun, engaging, and social. Through the app, he meets other university students who share their experiences, which helps boost his motivation and keeps him consistently active.

Expectations

- A simple and easy-to-use platform for integrating movement into daily life.
- Social interaction to make physical activity more enjoyable.
- Personalized movement suggestions based on schedule and preferences.
- Small incentives, like challenges or rewards, to stay motivated.
- Flexibility in activities to balance academics and exercise.

Pain Points

- Struggles with consistency due to a lack of motivation.
- Finds traditional exercise routines too structured and unappealing.
- Prefers casual movement but lacks social support to stay engaged.
- Academic workload makes it difficult to maintain a routine.
- Weather and expensive indoor activity fees create barriers.

At Home	App Download	Using the App	Plans & Comparison	Having Activity	End of day
Bosco sits at his desk, frustrated that he can't concentrate on his assessment. He remembers that walking has helped him focus before but hesitates.	While scrolling on social media, Bosco sees an ad for "Move Motivator". He reads that it helps students stay active through social connections and gamified challenges.	Bosco customizes his profile and connects with other students looking for movement buddies. He joins fun challenges like "Step Goals with Friends" and "Outdoor Study Break Walks". The app tracks progress and rewards small milestones, keeping him engaged.	Bosco notices that the app provides comparisons between different activity options. He finds flexible movement plans that integrate well with his academic schedule.	Bosco starts participating in group challenges and casual activities with new friends. The social aspect makes movement feel more enjoyable and less like a chore.	With new friends and interactive challenges, Bosco maintains a consistent activity routine. He feels both physically and mentally better, and his academic focus improves.
Stressed, Distracted, Unmotivated, Overwhelmed	Curious, Hopeful, Slightly Skeptical	Excited, Engaged, Motivated	Informed, Prepared, Encouraged	Connected, Motivated, Energized	Impactful, Successful
"I can't focus at all. Maybe I should go outside for a bit?"	"This sounds interesting... Maybe this will help me stay consistent?"	"This makes movement way more fun! I actually look forward to it."	"I love that I can balance this with my studies and still stay active."	"This is actually fun! I feel way more motivated now."	"I never thought I'd enjoy movement this much! This is so much better than doing it alone."

Compare with group pitch Participant C user journey, Updated point:

User journey focus on how user use the app instead of how he find ways to incorporating movement into his routine.

SWOT analysis of Samsung Health

Strengths

- **Comprehensive features**

(Steps tracking, sleep analysis, stress measurement)

- **Integration with Samsung ecosystem**
- **User-friendly interface**
- **AI and Personalization**

(Provides tailores health insights and recommendations based on user data)

- **Free to use**

Weaknesses

- **Limited compatibility**

(Works best with Samsung device)

- **Data accuracy concerns**

(Sensors on device may not accurate)

- **Lack of social features**
- **Battery drain**

(Constant tracking can impact battery life)

- **Calories calculated**

(Can be stress for users)

Opportunities

- **Expansion of health AI**
- **Integration with more wearables**
- **Corporate wellness partnerships**
- **Telehealth and remote monitoring**

Threats

- **Strong competition**

(Faces tough competition from Apple Health and other health tracking apps.)

- **Privacy concerns**

(Handling sensitive health data requires robust security measures)

- **Regulatory challenges**

(Stricter health regulations and compliance requirements may pose hurdles.)

- **Wearable market trends**

User flow

Changes in Profile page:

1. All component pages inside profile, for example in “Activity Overview”, button design changed, also position changed.

User Testing

Feedback from user after prototype updated based on feedback

- Some features or page might need a label or light instruction.

"What is Quick Share and Ask Question mean in hub page ? Adding descriptive text might be better"

"In community page, I don't know I can scroll down the page, adding scrollbar may be easier to let other people know the page could scroll."

- Add dark mode into the prototype

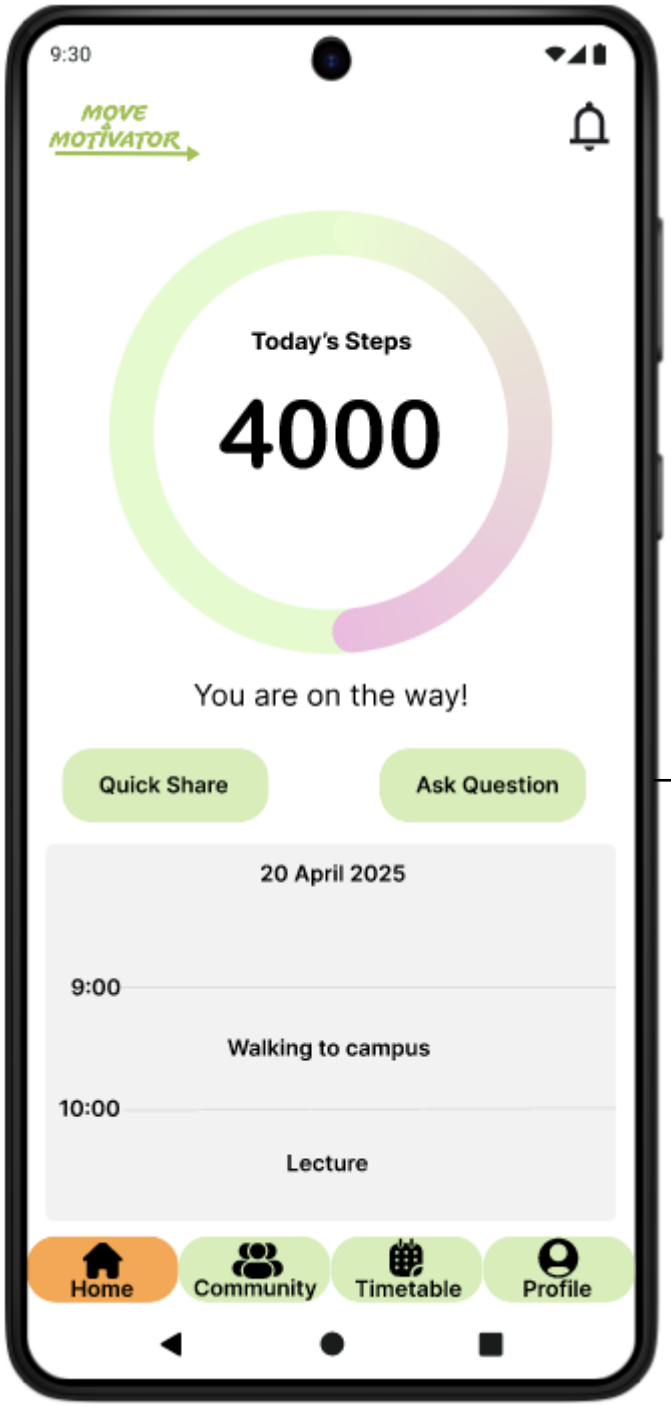
"Just similar with Whatsapp or Discord, will you consider to let user switch between dark or light mode ?"

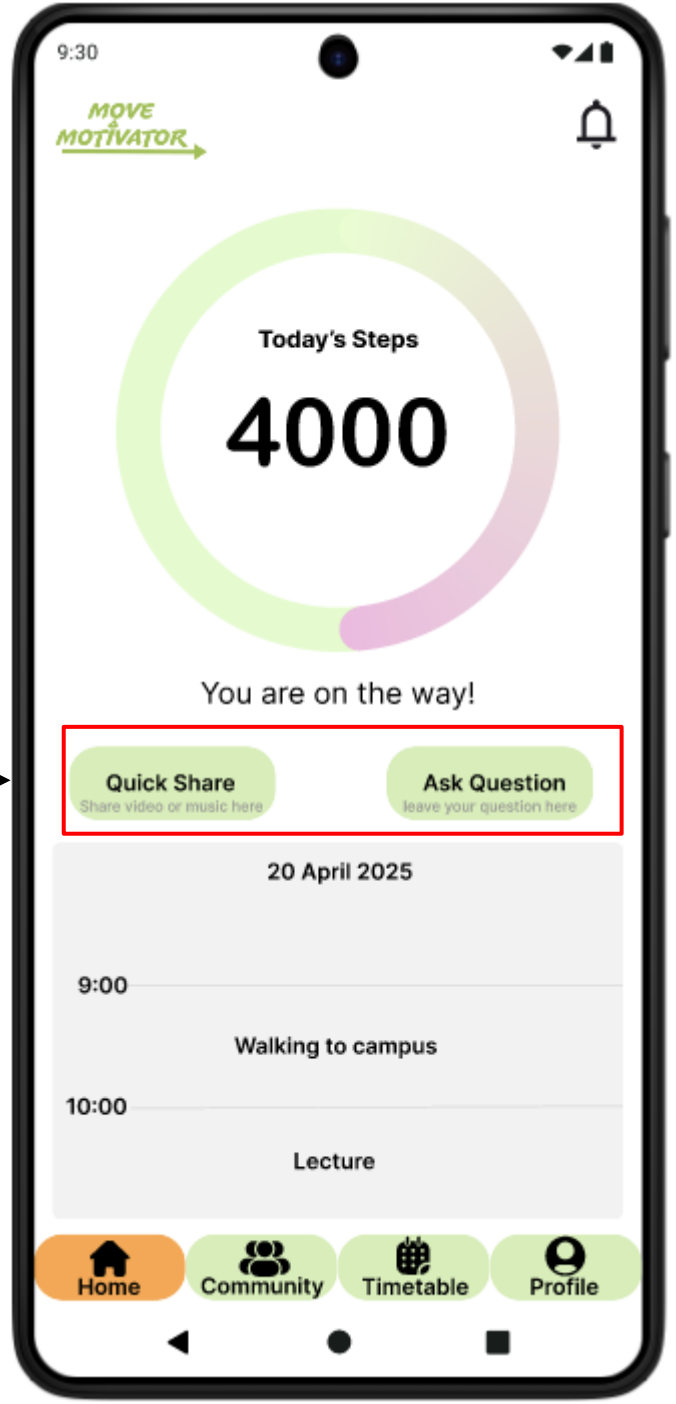
- Platform problem

"I want to know the prototype work in iOS device"

Updated Prototype

updated based on user testing





descriptive text added
